

PALLET™

S2 Shelters

OUR NEWEST LINE OF EMERGENCY SLEEPING CABINS

WHY PALLET

No one should go unsheltered when a shelter village can be built in a day.

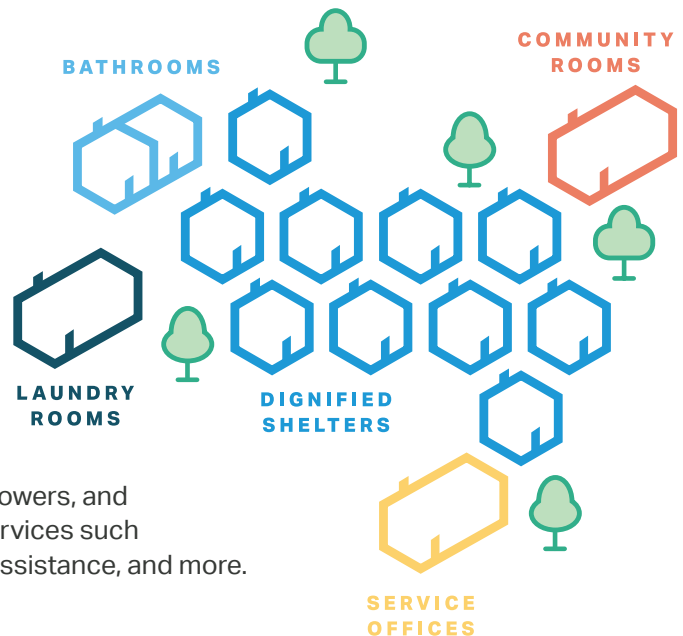

Pallet responds to emergencies and housing needs with solutions built fast, at scale. From private shelters with lockable doors to onsite bathrooms, our village residents have peace of mind while they rest their heads in a safe space. Each shelter can be assembled in one to two hours.

Pallet's Model

The Pallet shelter village model is part of a larger ecosystem. Our villages were designed from a foundational belief that every human deserves inherent and absolute dignity.

Our sleeping shelters have a locking door, windows that open and close, storage for belongings, shelving, personal climate control, electrical outlets, and fire safety features.

Village residents have access to bathrooms, showers, and laundry. An onsite care team provides social services such as case management, housing navigation, job assistance, and more.

End-to-End Support

Pallet has built thousands of shelters across the United States. Our team offers personalized consultative services to all clients. We have end-to-end expertise in the multi-stakeholder process required to create healing shelter villages with speed and at scale. Our deployment team travels from city to city, building Pallet shelter villages and offering advisory and training services on how to maintain them. Our goal is to provide a seamless experience for our customers while we preserve the tenets of our community village model.

PRODUCT IS THE BACKBONE OF PALLET

CONTINUOUS INNOVATION

The next generation of Pallet shelters is here. Meet the S2 line of emergency sleeping cabins.

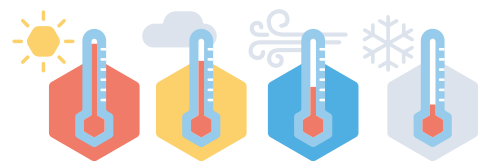

S2 Sleeper (70 & 120 sq. ft.)

S2 EnSuite (120 sq. ft.)

At Pallet, we are always striving to do better for the people we serve. We are dedicated to learning from those with lived experience and use this insight to innovate our products and meet the needs of our communities. The S2 line of emergency cabins has taken what we've learned from residents of our shelter communities and combined it with the knowledge from our in-house engineering team to create industry-leading dignified emergency shelter solutions.

We Provide Comfort In Any Climate

No matter the weather, we have a shelter configuration that provides comfort, dignity, and safety. There are three elements to consider when configuring a shelter for your climate: heating for cold temperatures, air conditioning for hot temperatures, and structural strength to match the wind and snow load your area experiences.

Pallet Shelters

Pallet shelter villages offer the dignity of private space in a healing community environment. They are designed to rapidly assist unsheltered populations with a resource net of onsite social services, as well as food, showers, laundry, and more to help people transition to permanent housing.

Infrastructure Needs

Pallet shelters are a flexible system that can be installed on a wide variety of surfaces and connected to a number of power sources and standard sewer service lines.

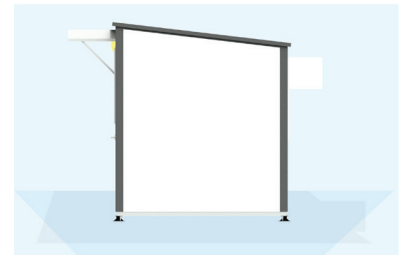

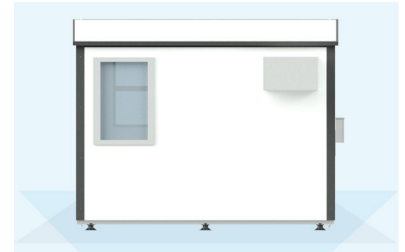

S2 Sleeper

(70 sq. ft. | 6.5 m²)

The Pallet™ S2 Sleeper is our new line in safe, dignified, rapid-response shelter solutions.

Our industry-leading design features a mono-pitch roof, smooth exterior and interior panels, improved energy efficiency, and protection from the elements. The S2 Sleeper is also designed for faster deployment and assembly.

The 70 sq. ft. (6.5 m²) model is perfect for one person or a couple.

Rapid: Our new patent pending connection system has fewer bolts, bringing installation time down to an hour.

Safe: Improved fire, wind, and snow load ratings, improved energy efficiency, advanced Low-E energy efficient dual pane windows with egress, and a new patent pending structural system, combined with Pallet's standard safety features makes our newest design the safest one yet.

Adaptable: Thanks to our patent pending tray foundation system and new tie-down feature, the S2 Sleeper line can be built in a variety of terrains and variable conditions.

Features

- Solid-Core, locking door with peephole and kick plate
- Heating and AC for all climates
- Advanced Low-E energy efficient windows
- Integrated customizable shelving system
- Three 120V convenience plugs
- Interior LED lighting
- Smoke and Carbon monoxide detector
- Fire extinguisher
- Pedestal leveling system
- Patent pending tray foundation system
- Patent pending structural hold down system
- Insulated FRP walls
- All materials of construction are non-organic, reducing mold, mildew, and pests
- Freestanding standard twin bed
- Freestanding desk
- Mattresses fitted with bedbug-resistant covers

Optional Features

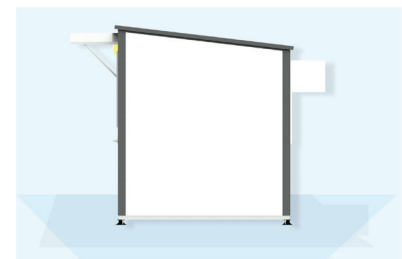

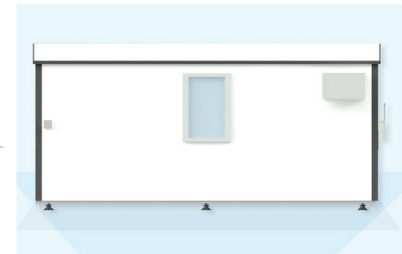

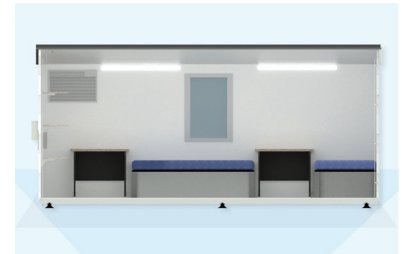

- Water diversion with integrated awning
- Digital door lock

S2 Sleeper

(120 sq. ft. | 11.15 m²)

The Pallet™ S2 Sleeper is our industry-leading line of safe, durable, rapid-response shelters. Designed for faster deployment and assembly, the S2 Sleeper also features improved energy efficiency and protection from the elements, smooth exterior and interior panels, and climate control options fit for any conditions.

The 120 sq. ft. (11.15 m²) is a comfortable and dignified space for two people or families.

Rapid: Our new patent pending connection system has fewer bolts, bringing installation time down to an hour.

Safe: Improved fire, wind, and snow load ratings, improved energy efficiency, advanced Low-E energy efficient dual pane windows with egress, and a new patent pending structural system, combined with Pallet's standard safety features makes our newest design the safest one yet.

S2 EnSuite

(120 sq. ft. | 11.15 m²)

The Pallet™ S2 EnSuite is the new addition to our industry-leading line of rapid-response shelters, combining the comfort of our Sleeper model with the convenience and dignity of in-unit hygiene facilities. The 120 sq. ft. (11.15 m²) floor plan can accommodate a bed, desk, and customizable shelving unit, creating a comfortable environment to rest and recharge.

The EnSuite is a convenient and inclusive space that sleeps one or two people.

Convenient & Inclusive An easily maneuverable layout that includes a toilet, shower, and sink. Allows residents to access hygiene facilities without having to face the elements.

Rapid: Our new patent pending connection system has fewer bolts, bringing installation time down to an hour.

Safe: Improved fire, wind, and snow load ratings, improved energy efficiency, advanced Low-E energy efficient dual pane windows with egress, and a new patent pending structural system, combined with Pallet's standard safety features makes our newest design the safest one yet.
